

# Bt 200.1

The Bass Face BT200.1 multimedia Bluetooth head unit bring complete audio connectivity to your car with high quality Digital/Audio converters, high powered 4 channel amplification, Bluetooth audio playback, handsfree calling and multicoloured LED illumination to match your car. It is our most advanced and best looking head unit yet!

Using the same high power mini DB amplification as the other members of the Bass Face head unit family. It provides a good level of power suitable for both OEM and after market speakers.

Bluetooth connectivity enables you to play music wirelessly from any Bluetooth enabled audio device! Bluetooth pairing is fast and simple and once your phone is connected, you can skip track, answer calls and with the built in Microphone you can use the BT200.1 as a hands free kit for your phone.

Visually, the simple, elegant design eliminates confusing and unnecessary cluttering of control buttons. Changing track, skipping folder, changing the colour of the lights are all easy to access one button controls.

The unit features a front USB port, supporting up to 32GB flash memory sticks. The microSD port also supporting up to 32gb means you can pop your entire music library into the head unit! With our new folder skip buttons, you can easily navigate your music by folder and ID3 tag will display the song title details.

Auxiliary audio input via 3.5mm Jack (Headphone) is also on the front of the unit for ease of connectivity, for iPods and other devices without Bluetooth connectivity. 4 channel 2v RCA output on the rear makes connecting multiple amps a doddle and the slim form factor, due to having no CD drive makes these easier to fit into pretty much any vehicle with a single DIN stereo.

The BT200.1 is a multimedia head unit with an excellent feature set, with RCA outputs for system building and AUX front input for iPod and MP3 players. By following these guidelines we hope that you get the most from your unit.

IT IS ABSOLUTELY CRITICAL THAT YOU TEST THE VEHICLE ISO PLUG BEFORE YOU COMMIT TO PLUGGING IN YOUR NEW BASS FACE UNIT. MANY VEHICLES HAVE STRANGE AERIAL OR IGNITION SET UP'S WHICH CAN DAMAGE THE NEW RADIO OR THE CAR IF THE CONFIGURATION IS NOT ALTERED BEFORE THE UNIT IS POWERED UP!

The Orange wire in the ISO is the the "remote" wire for electrically controlled aerials and switching amps on and off. In the case you have an electric aerial, you are going to need to splice the wire for connecting amps. If not then just cut the wire and connect is using a ratchet crimp or screw terminal.

The wiring harness comes in the most common configuration The unit is pre fitted with a proper wiring harness and ISO female which can be plugged into many ISO compatible cars without further work.

Because there is a proper wiring harness, it is easy to cut the cables between the radio and the ISO plug and make changes without modifying the vehicle. A more sophisticated way of doing this is to pull out the connector from the ISO block (should come out easily) and swap them over. If all that is needed is the constant live and the ignition feed swapping positions, then you can simply unscrew the fuse holders and swap the lines over that way.

Most importantly, check and double check before you install the unit!

Please refer to the wiring diagram on the top of the radio for detailed colour instructions for the wires. If at all unsure consult a professional fitter or email for support. Do not attempt to wire the unit with the ignition switch turned on, the ignition should be live only to test the 12v ignition and remote wires and then turned off before connections are made.

If you have to remove the ISO plug because you are installing the unit into a caravan or other vehicle that requires a bare ended cable setup then please pay extreme attention to the wiring. Use proper soldered or ratchet crimped connections and ensure that insulation is made in a correct and professional way. Note that the earth needs to be made really well to get the most out of the integrated amplifier. Note also that the unit needs to see power on the memory wire (yellow) AND power on the ignition switch wire (red) for it to power up. You can run up to 4 speakers at 4 ohms each off this unit. DO NOT attempt to run the unit with a nominal impedance of less than this value, otherwise non-warrantable damage can result. (i.e. leaving existing rear speakers connected when you add additional speakers in a parcel shelf etc)

Once the unit is installed and working, you can refer to the following guide lines:

To avoid fire or electric shock, do not use the unit in the rain or in excessively humid areas.

Never configure the unit while operating the vehicle. This will cause distraction and could result in an accident!

Clock setting:

1. Press CLOCK or 2 seconds to adjust the clock, the time should begin flashing.
2. Adjust the volume up/down to set the hour/minute as appropriate
3. Press CLOCK again to set time.

Clock display on/off

Pressing the CLOCK button once will turn the clock display on/off

Illumination Colour Select:

When first installed, the unit will flash between all colours. Press the "C" button on the top right to cycle between the colours. Hold down this button to turn illumination on or off.

BT Mode:

1. Bluetooth connection - press MOD to get to BT MODE then select CART-BT on Bluetooth device list.
2. Track next and previous to change song.
4. Button "1" is play pause.
5. To accept incoming call press MOD button.

USB Mode:

Bottom buttons:

1. Play Pause
2. INT - Intro (play first 10 seconds)
3. RPT - Repeat. Press once for repeat track, twice for repeat directory (folder) and three times to repeat all (repeat off)
4. RDM - Random. Press once for random, again to switch off
5. -10 - Press to go back 10 tracks
6. +10 - Press once to go forward 10 tracks
7. Folder + Go up 1 folder (Directory)
8. Folder - Go down 1 folder (Directory)

AUX Mode:

Plug 3.5mm Jack cable from head unit to audio device (iPod, iPhone, Mp3 player) and the head unit will work as an amplifier only.

Tuner Mode:

BND/AMS - Press once to access tuner mode. Hold down for 3 seconds to scan through airwaves and automatically assign each station to numbers 1-6.

If you want to assign a specific frequency to a preset number 1-6 then when you are on that station, hold down number 1-6 and it will store to that number.

Control Knob / Volume Knob:

Press the volume / multi control knob to cycle through the settings and turn it to make adjustments.

Controls available:

BASS - Bass up and down

TRE - Treble up and down

FAD - Fader Front to Rear

BAL - Balance Left to Right

LOUD - Loud on and off

EQ - Select from EQ from - ROCK, POP, JAZZ, CLASSICAL

BT CON - Bluetooth connect on and off

ID3 - Turn ID3 on and off

LOUD button - This will turn the loudness effect on and off.

MUTE - Press this button for Mute on and off.
